

PLACEHOLDER not a real bill.
EPS Snabdevanje, jun 2026.

The real bill PDFs live in data/raw/, which is never committed. They are in the private archive bucket and reach a tenant only through /s/<token>/racun/<id>, which streams them from this server: a storage key names the unit, so it never crosses the wire.

This stub is what that route serves for a committed example. There is no archive behind a demo.
